## What is ERASME?

Erasme or EnerGy Audits in SMEs is a project that develops and promotes energy audits' use in SMEs in Central Europe as a tool for reducing the high cost of energy.

## Countries involved

The ERASME project is conducting in 7 European countries.

**Austria | Czech Republic | Croatia | Italy | Hungary | Germany | Poland**

International orientation of the project is key to achieving the desired number of participants and the energy savings that will have a real impact.

## Project objectives

The project objective is to demonstrate that a more effective solution for Energy Audits in SMEs is possible and practicable.

The area of operation is intended for use at the regional level (mainly central and eastern Europe with a comparison with the Irish situation).

On a longer term, the strategic objective is to multiply the ERASME network by committing the regional SMEs' associations to continue to disseminate the auditing approach and to maintain the international contacts.
